## TP Modul 8

```
Berapa suhu badan anda saat ini? Dalam nilai celcius
21
Berapa hari yang lalu (perkiraan) anda terakhir memiliki gejala deman?
3
Anda tidak diperbolehkan masuk ke dalam gedung ini
Satuan suhu telah diubah menjadi: fahrenheit
D:\Setya\Clone\KPL_Putra-Strata-Tandika-Setyawan_2311104050\08_Runtime_Configuration_dan_Internationalization\TP\tpmodul8_2311104050\tpmodul8_2311104050\bin\Debug\net8.0\tp
modul8_2311104050.exe (process 6380) exited with code 0 (0x0).

Press any key to close this window . . . _
```

1. Membuat file config

```
Covid_configjson X

ra-Strata-Tandika-Setyawan_2311104050 > 08_Runtime_Configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_strate_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_strate_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_dan_Internationalization > TP > tpmodul8_2311104050 > tpmodul8_2311104050 > bin > Debug > net8.0 > {} covid_configuration_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internationalization_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internation_dan_Internatio
```

2. Membuat Class CovidConfig.cs

```
using System;
using System.IO;
using Newtonsoft.Json;
public class CovidConfig
    public string satuan_suhu { get; set; } = "celcius";
    public int batas_hari_deman { get; set; } = 14;
    public string pesan_ditolak { get; set; } = "Anda tidak diperbolehkan
masuk ke dalam gedung ini";
    public string pesan_diterima { get; set; } = "Anda dipersilahkan untuk
masuk ke dalam gedung ini";
    public void LoadConfig(string filePath)
        if (File.Exists(filePath))
            var json = File.ReadAllText(filePath);
            var config = JsonConvert.DeserializeObject<CovidConfig>(json);
            satuan_suhu = config.satuan_suhu;
            batas_hari_deman = config.batas_hari_deman;
            pesan_ditolak = config.pesan_ditolak;
            pesan_diterima = config.pesan_diterima;
        }
```

3. Memanggil method di program.cs

```
using System;
class Program
    static void Main(string[] args)
        CovidConfig config = new CovidConfig();
        string configFilePath = "covid_config.json";
        config.LoadConfig(configFilePath);
        Console.WriteLine($"Berapa suhu badan anda saat ini? Dalam nilai
{config.satuan_suhu}");
        double suhu = Convert.ToDouble(Console.ReadLine());
        Console.WriteLine("Berapa hari yang lalu (perkiraan) anda terakhir
memiliki gejala deman?");
        int hariDeman = Convert.ToInt32(Console.ReadLine());
        bool isSuhuValid = (config.satuan_suhu == "celcius" && suhu >= 36.5
&& suhu <= 37.5) ||
                           (config.satuan_suhu == "fahrenheit" && suhu >=
97.7 && suhu <= 99.5);
        bool isHariValid = hariDeman < config.batas_hari_deman;</pre>
        if (isSuhuValid && isHariValid)
        {
            Console.WriteLine(config.pesan_diterima);
        }
        else
            Console.WriteLine(config.pesan_ditolak);
        // Contoh penggunaan method UbahSatuan
        config.UbahSatuan();
        Console.WriteLine($"Satuan suhu telah diubah menjadi:
{config.satuan_suhu}");
```
